Aftertalk

BUILD BRIEF · APRIL 26–27, 2026
github.com/theaayushstha1/aftertalk

A 7-DAY TAKE-HOME ↑ DAY 3 HIT ON DAY 1 · 3× PLAN PACE

A meeting recorder that runs *entirely on the iPhone.*

You hit record. The phone listens, writes the transcript as people talk, and afterward hands you a clean summary of what was decided, who agreed to do what, and what was left open. Then you ask it questions out loud and it answers, also out loud — without ever touching the internet. The plan budgeted three days for this milestone. It shipped in one.

01	02	03	04
Listen	**Summarize**	**Answer**	**Prove it**
Live on-device transcription	Decisions, actions, topics	Voice Q&A in airplane mode	Three privacy audits, real numbers

What shipped this week

COMMIT HASHES LINK TO GITHUB

Day 0 THE STARTING LINE	Set up the Xcode project, put the repo on GitHub, locked the plan, committed to the deadline. The week was scoped to seven days during finals — clarity over ambition.	`64863ae`
Day 1 PHONE LEARNS TO LISTEN	Wired the iPhone microphone to a small speech model that runs on the device. From the moment someone starts speaking, words begin appearing on screen in about a **tenth of a second**. No cloud, no Apple Speech, no network calls.	`a3b4495` `09b84e8`
Day 2 PHONE LEARNS TO SUMMARIZE	After a meeting ends, the phone reads its own transcript and writes a structured digest: topics covered, decisions made, action items with names attached, questions left open. Same chip in your pocket — no servers.	`35c4aee` `b7c7421` `8594665`
Day 3 PHONE LEARNS TO TALK BACK	Hold a button, ask a question by voice, and the phone answers out loud — pulling from the meeting it just heard. First spoken word in **104 milliseconds**. Full reply in under a second and a half. Still no internet.	`a0c6ba6` `1efb5d6` `e0f5793` `3e4c323`

The headline numbers

104 ms	1.44 s	310 mb	0
FIRST SPOKEN WORD	FULL Q&A TURN	TOTAL MODEL SIZE	NETWORK REQUESTS
